

CALDA TACK

Screeded Floor Build Up System

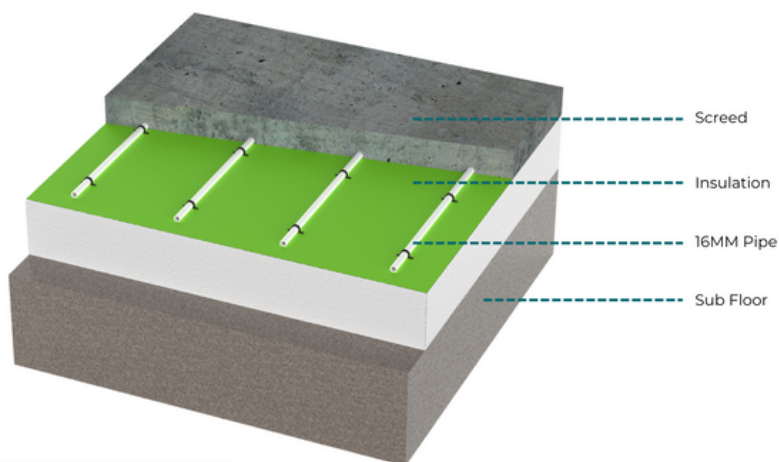

Calda Tack is our go to system for screeded floor build up's.

Calda Tack consists of high quality 5 layer PE-RT underfloor heating pipework, tacked onto insulation panels using 60mm tacker clips. A layer of liquid or cement screed can then be applied on top.

This is the most suitable system for screeded new build projects. It produces a high heat output, whilst remaining cost effective.

Features:

- Can be used with almost any floor finish
- Utilises Calda's 16mm 5 Layer PERT life time warranty
- High heat output system
- Quick installation
- Perfect for concrete subfloors

Heat Outputs

Pipe Spacing	Mean Flow Temperature	Output – Tiles/Stone (w/m ²)	Output – 1 tog floor covering resistance (w/m ²)
150	40	112	67
150	45	141	84
150	50	169	101
200	40	97	61
200	45	121	76
200	50	146	92
