

## Calda Programmable Thermostat (230V)

Our thermostat is a multifunctional thermostat with a digital display. It can be used to control any form of heating, including underfloor heating and radiators. It is programmable and able to control heat from both floor and air temperature.

It works perfectly with underfloor heating as part of a multi thermostat control system to heat your property room by room.

Programmable Thermostat - Allows different temperature at set times.

Non-Programmable - Can be set at a continuous temperature.

Remote Sensor (Floor and Air)

Floor Limit protection (with probe)

Frost Protection

Multi functional - Can be used to control any heating system

Perfect for multi room underfloor heating systems
